

1. **Light ON and OFF switch**
2. **Integrated safety switch**
3. **Vibration-free connection supports**
4. **Washable polyester filter** no need to buy new filter, simply wash under cold tap
5. **Powder- coated steel housing, lid & dirt container**
6. **Super sound insulation < -60db** Distance is measured @ 1m from unit
7. **Carbon brushes automatically switch off** Carbon brushes switch off when worn out so doesn't damage the motor, after brushes are changed the central vacuum will run as normal
8. **Gentle start up motor** Ensures the motor does not receive full strength of electric current resulting in less wear and lower vibration and so longer life span
9. **Separate air cooling on motor** Even cooling of motor so therefore prevents over heating and greatly increases the life time of the power unit
10. **Cyclone separator** The dirt is pushed to the outer wall of the housing by the cyclone separator. The dirt is then separated and falls into the container
11. **Dust free dirt removal with patented dust bag** This is the only system that completely protects you from the dirt. The dust bag is sealed before you take it out of the dirt container
