

## Drawer vac

Drawer Vac is a new system accessory that simplifies how homeowners clean their countertops of food waste, paper scraps and other unwanted debris. Mounted just beneath the countertop in either a cabinet or drawer, users simply pull Drawer Vac's tray forward, activating the central vacuum, and hand-sweep debris into its powerful suction stream. When finished, the pan retracts and automatically turns off the vacuum. No bending or stooping is required! Drawer Vac is a high-value addition to any central vacuum system, bringing convenience to kitchens, bathrooms, laundry rooms, hobby rooms or workshops.
